

Candidate Name: Tanishk

Application Tested: SauceDemo (<https://www.saucedemo.com>)

Testing Date: 01 June 2026

Objective:

To perform functional and usability testing on the SauceDemo web application and identify issues affecting user experience and application quality

Application Flows Tested

- Login
- Add Product to Cart
- Remove Product from Cart
- Checkout Process
- Order Completion
- Reset App State
- Logout

Test Case	Result
Login	Pass
Add to Cart	Pass
Checkout	Pass
Price Calculation	Pass
Finish Order	Pass
Order Confirmation	Pass
Reset App State	Issue Found

Bug Report Table

#	Title	Steps to Reproduce	Expected vs Actual	Severity	Suspected Cause
1	No password visibility toggle on login page	Open login page, enter password	Expected: User can show/hide password. Actual: Password always hidden.	Low	Missing password visibility component
2	Login error message is not user-friendly	Enter invalid credentials and click Login	Expected: Helpful message guiding user. Actual: Generic/technical error shown.	Medium	Backend error exposed directly
3	Reset App State clears cart without confirmation	Add items → Menu → Reset App State	Expected: Confirmation popup before reset. Actual: Cart clears immediately.	Medium	Missing confirmation dialog
4	No loading indicator during login/checkout	Click Login or Finish Checkout	Expected: Loading spinner/progress indicator. Actual: No feedback during processing.	Low	Loading state not implemented
5	Product catalog lacks search functionality	Open Products page and try to find a specific item	Expected: Search/filter feature available. Actual: Only sorting options available.	Low	Search functionality not implemented

Root Cause Analysis

Issue Selected

Reset App State clears data without confirmation

Analysis

The application allows users to reset the application state directly from the navigation menu. When the Reset App State option is selected, the cart contents and user-related application data are cleared immediately. No confirmation dialog or warning message is displayed before the action is performed.

This behavior can result in accidental loss of user data and negatively impact user experience. The issue appears to occur because the reset functionality is directly linked to the menu action without an intermediate validation step.

To resolve the issue, a confirmation dialog should be introduced before the reset action executes. The dialog should clearly explain the impact of the action and provide Confirm and Cancel options. This additional safeguard would help prevent accidental data loss and improve overall usability.

Regression testing should also be performed to verify that the confirmation dialog appears consistently and that the reset operation only occurs after explicit user confirmation.

Conclusion

The application successfully completed all major functional flows including login, cart management, checkout, and order confirmation. However, several usability issues were identified that may impact user experience. Addressing these issues would improve application quality and reduce user errors.
